

Applied Materials Japan

Applied Materials Japan, Inc. was established in 1979 as Applied Materials' first subsidiary in Asia region. Applied Materials Japan provides innovative equipment and software to customers for manufacturing semiconductor and flat panel display. With customer service centers located across the country, Applied Materials Japan supports customers to improve fab productivity through system improvements, automation software, and fab consulting. Applied Materials Japan also works closely with global R&D facilities on technology development to provide leading-edge support to Japanese customers.
